Sprint 4 Review meeting – October 30, 2026

Project: Clinic Appointment System
Meeting Type: Sprint Review
Duration: 17:34 minutes
Platform: Google Meet

Attended by:

Name	Role
Mineh Jami	Scrum Master
Sewara Rashidi	Team Developer
Sonbol Almas	Team Developer
Husna Zala Khan	Product Owner

Meeting subject:

The purpose of the meeting was to review the final increment and have the product owner judge it based on the acceptance criteria. Additionally, the stakeholder feedback will be reviewed, and testing data will be presented.

Meeting Summary:

Mineh Jami (Scrum master): Introduced the meeting, welcomed the participants, reiterated the Sprint Goal and confirmed that October 30 is the final day of Sprint 4, explained the documentation of the Sprint Goal, the finished tasks and the blockers taking place during the sprint. Additionally, she judged the items demonstrated and made suggestions.

Sewara Rashidi(Team developer): Performed the demo which had these parts:
Appointment history: She logged in as a patient and showed the new “My Appointments” button which took her to a page with three sections: Upcoming Appointments, Previous Appointments, and Cancelled Appointments. Each recorded appointment has details on the doctor, appointment date, start time, end time, status and actions.

Appointment Rescheduling: She stated that in case a patient has a change of plans, they can reschedule and choose an alternative slot from the available times instead of cancelling. She demonstrated this by creating a test appointment, which appeared in the “Upcoming Appointments” section of the “My Appointments” page. Under the “Actions” tab, there were cancel and reschedule buttons. When she clicked reschedule, it showed her the available times to select from and she also showed the success message from the browser. The security for this section included making sure that the appointment belongs

to the logged in patient, and that the new time is available and the change follows the rescheduling rules.

Cancelling Appointments: For this feature, she cancelled the test appointment she created by clicking on the “cancel” button, and showed the success message as well as the now empty “Upcoming Appointments” section. Instead, the appointment is now shown in the cancelled appointment section. An important backend feature for this user story was that the cancelled appointments become available for other patients to book.

Doctor Profile management: She logged in as a doctor and clicked on “My Profile” where a doctor can view and edit their information such as their name, specialty, professional information, qualifications, years of experience and professional biography. She made a change to the test doctor profile and saved it successfully. Then through a patient account she demonstrated that the updated information is now visible by them as well.

Appointment reminders: She shared that this feature was built through php, php mailer, MySQL, mailtrap and windows task schedule. How it works is that the system identifies confirmed appointments and sends reminders approximately 24 hours before the start time. In mailtrap, she showed the previously sent emails for the appointments and the information it included. The database also included a table for appointment reminders where it showed the sending status either as sent or as failed.

Husna Zala Khan(Product Owner): Acceptance criteria were evaluated and confirmed by Husna though a comprehensive checklist. She also expressed her satisfaction with the work the team had completed this sprint and deemed the final increment to be perfect.

Key Points of the meeting:

- Sprint Goal and objective was met.
- Demonstration of the working features was successful.
- Final Increment was approved by the product owner.
- No unfinished tasks remained at the end of the sprint.
- Testing results completed.

Notes:

None
