Sprint 4 — Product Owner Clarifications

Project: Clinic Appointment System
Sprint Period: October 27–28, 2026
Product Owner: Husna Zala Khan

1. Appointment Cancellation (US-09)

Question: How late may patients cancel their appointments?

Patients may cancel appointments up to **2 hours before the scheduled appointment**. Cancellations within 2 hours of the appointment should not be allowed through the system and should require contacting the clinic.

2. Appointment Rescheduling (US-10)

Question: Can patients change doctors, or only choose another date and time with the same doctor? Is there a time restriction?

Patients may reschedule with the same doctor only, choosing another available date and time. Rescheduling is allowed up to **2 hours before the original appointment**. The system must check doctor availability and prevent double-booking.

3. Appointment History (US-12)

Question: Should cancelled appointments remain visible in appointment history?

Yes. Cancelled appointments must remain visible in the patient's appointment history with a clear **Cancelled** status. Completed and upcoming appointments should also be displayed with their appropriate statuses.

4. Appointment Reminders (US-13)

Question: Should reminders be delivered inside the website or through email? How long before the appointment should they be sent?

Reminders should be delivered through **email**, preferably **24 hours before** the scheduled appointment. The system should send reminders only for appointments that have not been cancelled.

5. Doctor Profile (US-14):

Question: Can we continue using the professional profile fields previously approved?

Yes. Continue using the previously approved professional profile fields, including the doctor's name, specialty, qualifications, experience, and professional contact information. The profile should display accurate information and be manageable by authorized users.

Final Note

These decisions define the proposed requirements for Sprint 4. The development team should review them during sprint planning and raise any technical concerns before implementation.
