Sprint 3 – Product Owner Checklist

A. Sprint Planning and Requirements

- [ ] Confirm that the team agrees on the Sprint Goal.
- [ ] Confirm the four selected user stories and their priorities.
- [ ] Review and clarify the acceptance criteria for all four stories.
- [ ] Confirm which patient profile fields can be edited.
- [ ] Define the schedule-management actions doctors are allowed to perform.
- [ ] Make sure the team understands the Definition of Done.

B. US-08 — Prevent Double-Booking

- [ ] Confirm developers test the existing booking protection before rewriting code.
- [ ] Verify a booked appointment slot becomes unavailable.
- [ ] Verify two patients cannot successfully book the same slot.
- [ ] Check that users receive a clear message when a slot is unavailable.
- [ ] Review the actual test results and any remaining defects.

C. US-11 — Appointment Confirmation

- [ ] Confirm successful bookings produce an appointment confirmation.
- [ ] Verify the confirmation displays the doctor’s name, date, start time, and end time.
- [ ] Verify the appointment status is shown as confirmed.
- [ ] Check that patients can view the correct confirmation for their own appointment.
- [ ] Verify confirmation is not displayed as successful when booking fails.

D. US-16 — Doctor Appointment Management

- [ ] Agree on the exact actions doctors can perform on their schedules.
- [ ] Verify doctors can view their scheduled appointments and relevant details.
- [ ] Verify doctors can access only their own appointments.
- [ ] Check that each approved management action works correctly.
- [ ] Confirm that unauthorized actions are blocked.

E. US-04 — Patient Profile Management

- [ ] Confirm the editable fields, such as full name, age, and phone number.
- [ ] Verify patients can view their own profile information.

- [ ] Verify patients can update permitted fields.
- [ ] Check that invalid input is rejected with clear feedback.
- [ ] Verify updated information is saved in the database.
- [ ] Verify patients cannot view or update another patient’s profile.

F. Integration, Testing, and Delivery

- [ ] Check that frontend pages connect correctly to the PHP backend.
- [ ] Review the required UML diagrams and editable Mermaid source.
- [ ] Confirm relevant Sprint 1 and Sprint 2 features still work.
- [ ] Check that unfinished work and known defects are documented.
- [ ] Prepare the Sprint Review demonstration.
- [ ] Evaluate each story against its acceptance criteria and Definition of Done.
