# Clinic Appointment System

## Product Description

The Clinic Appointment System is a software system designed to simplify and organize the process of scheduling and managing medical appointments within a clinic. The system will provide a centralized platform where patients can find doctors, view their availability, and book, cancel, or reschedule appointments.

The system will also allow doctors to manage their availability and appointments, while clinic receptionists or administrators can manage patients, doctors, and appointment records.

The system aims to replace or reduce manual appointment management processes and provide a more organized, efficient, and accessible way of managing clinic appointments.

## Product Vision

To develop a reliable and user-friendly Clinic Appointment System that enables patients to conveniently schedule and manage appointments with doctors while allowing doctors and clinic staff to efficiently manage schedules, patients, and appointments.

## Product Objectives

- The main objectives of the Clinic Appointment System are to:
- Provide patients with an easy way to find available doctors and appointment slots.
- Allow patients to book, cancel, and reschedule appointments.
- Allow doctors to manage their availability and view their scheduled appointments.
- Allow receptionists or administrators to manage doctors, patients, and appointments.
- Reduce manual appointment scheduling and record-keeping.
- Prevent appointment conflicts and double-booking.
- Maintain organized appointment information.
- Improve communication and coordination between patients, doctors, and clinic staff.
- Provide a centralized system for managing clinic appointments.

## 1. Target Users and Stakeholders

The main users and stakeholders of the Clinic Appointment System are patients, doctors, receptionists/administrators, and clinic management.

| Actor   | Who are they?                                                 | Main interaction                                                                                  |
|---------|---------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| Patient | A person who wants medical consultation                       | Register, search for doctors, view available appointment slots, and book and manage appointments. |
| Doctor  | A healthcare professional who provides medical consultations. | Manage availability and view/manage appointments                                                  |

|                            |                                                                                                                               |                                                                          |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|
| <b>Receptionist /Admin</b> | <b>A clinic staff member responsible for supporting the administrative management of patients, doctors, and appointments.</b> | Manage patients, doctors, appointments, and clinic information           |
| <b>Clinic Management</b>   | Individuals responsible for overseeing the clinic's operations.                                                               | Ensure efficient appointment management and organized clinic operations. |

**Patient:** Patients will use the system to register, manage their profiles, search for doctors, view available appointment slots, and book and manage their appointments.

**Doctor:** Doctors will use the system to manage their availability, view scheduled appointments, and manage their appointment schedules.

**Receptionist/Administrator:** Receptionists or administrators will manage clinic information, doctors, patients, and appointments. They will also support the overall administration of the system.

**Clinic Management:** Clinic management will oversee the overall operation of the clinic, monitor appointments and staff activities, and ensure that clinic information and services are managed effectively through the system.

## High-Level System Scope

The initial scope of the Clinic Appointment System focuses on the management of clinic appointments and the interaction between patients, doctors, and clinic staff.

The system will include the following core functionalities:

- User registration and login
- Patient profile management
- Doctor profile management
- Doctor availability management
- Doctor search
- Viewing available appointment slots
- Appointment booking
- Appointment cancellation
- Appointment rescheduling
- Appointment confirmation
- Appointment history
- Appointment notifications and reminders
- Administrative management of patients, doctors, and appointments

The system will primarily focus on **appointment scheduling and management**. The main users of the system will be **patients, doctors, and receptionists/administrators**.

Advanced healthcare and financial functionalities, such as electronic medical records, prescription management, diagnosis records, laboratory results, insurance management, and online payment processing, will be considered **outside the initial scope** of the system. These functionalities may be considered as future enhancements if required.

## 2. Requirements

Before developing a system, it is important to understand what the system should do and what users expect from it. Requirements help us identify the needs of users and determine the functions and qualities the system should have. In software engineering, there are two main types of requirements: user requirements and system requirements.

**User Requirements:** User requirements explain what users need from the system. In our Clinic Appointment System, for example, patients need to book appointments, doctors need to manage their availability, and receptionists need to manage patient and appointment information.

**Stakeholder Identification and Analysis:** Stakeholder analysis identifies the needs and expectations of the people who interact with or have an interest in the Clinic Appointment System. Understanding these needs will help define the system requirements, user stories, and priorities in the Product Backlog.

**Patient Needs:** Patients should be able to:

- Create an account and securely log in.
- Manage their personal profile.
- Search for doctors.
- View doctor information and availability.
- View available appointment dates and time slots.
- Book an appointment.
- Receive appointment confirmation.
- Cancel an appointment.
- Reschedule an appointment.
- View upcoming and previous appointments.
- Receive appointment notifications and reminders.

**Doctor's Needs:** doctors should be able to:

- Securely log in to the system.
- Manage their professional profile.
- Set and manage their availability.
- View their upcoming appointments.
- View relevant appointment details.
- Manage their appointment schedule.
- View their appointment history.

**Receptionist/Administrator Needs:** Receptionists/administrators should be able to:

- Securely log in to the system.
- Manage patient information.
- Manage doctor information.
- Manage doctor availability.
- Create and manage appointments when necessary.
- View and manage scheduled appointments.
- Cancel or reschedule appointments when required.
  
- Maintain organized appointment records.
- Manage relevant clinic information.

**Clinic Management Needs:** Clinic management should be able to:

- Maintain an organized appointment management process.
- Reduce manual appointment scheduling and record-keeping.
- Reduce appointment conflicts and double-booking.
- Maintain accurate and reliable appointment information.
- Ensure efficient coordination between patients, doctors, and clinic staff.
- Monitor the overall operation of the appointment management system.

## System Requirements

System requirements describe in more detail what the system must do and how it should work. They include functional requirements, which explain the system's features, and non-functional requirements, which describe qualities such as security, usability, performance, and reliability.

Based on the needs of the identified stakeholders, the following requirements have been established for the initial version of the Clinic Appointment System.

**Functional Requirements:** Functional requirements describe the specific functions and services that the system must provide.

### User Account and Authentication

- FR-01: The system shall allow users to register for an account.
- FR-02: The system shall allow registered users to log in securely.
- FR-03: The system shall provide different access permissions based on the user's role.

### Patient Management

- FR-04: The system shall allow patients to create and manage their profiles.
- FR-05: The system shall allow patients to search for doctors.
- FR-06: The system shall allow patients to view doctor information and availability.
- FR-07: The system shall allow patients to view available appointment dates and time slots.

## Appointment Management

- FR-08: The system shall allow patients to book available appointments.
- FR-09: The system shall prevent two patients from booking the same appointment slot.
- FR-10: The system shall allow patients to cancel appointments according to the clinic's cancellation rules.
- FR-11: The system shall allow patients to reschedule appointments.
- FR-12: The system shall provide appointment confirmation after a successful booking.
- FR-13: The system shall allow patients to view their upcoming and previous appointments.
- FR-14: The system shall provide appointment notifications and reminders.

## Doctor Management

- FR-15: The system shall allow doctors to manage their professional profiles.
- FR-16: The system shall allow doctors to set and manage their availability.
- FR-17: The system shall allow doctors to view their scheduled appointments.
- FR-18: The system shall allow doctors to manage their appointment schedules.

## Receptionist/Administrator Management

- FR-19: The system shall allow authorized receptionists/administrators to manage patient information.
- FR-20: The system shall allow authorized receptionists/administrators to manage doctor information.
- FR-21: The system shall allow authorized receptionists/administrators to manage appointments.
- FR-22: The system shall allow authorized receptionists/administrators to manage relevant clinic information.

**Non-Functional Requirements:** Non-functional requirements describe the quality, security, usability, and performance characteristics of the system.

## Security

- NFR-01: The system shall protect user accounts through secure authentication.
- NFR-02: The system shall restrict access to information according to user roles.
- NFR-03: The system shall protect users' personal information from unauthorized access.

## Usability

- NFR-04: The system shall provide a simple and user-friendly interface.
- NFR-05: The system shall provide clear messages when an action is completed or an error occurs.
- NFR-06: The system shall allow users to navigate the main functions easily.

## Performance

- NFR-07: The system should respond to normal user actions within a reasonable amount of time.
- NFR-08: The system should support multiple users accessing the system without significant performance degradation.

## Reliability and Availability

- NFR-09: The system should maintain accurate appointment information.
- NFR-10: The system should prevent loss or corruption of appointment data during normal operation.

## Maintainability

- **NFR-11:** The system should be designed using a modular structure so that features can be maintained and updated easily.
- **NFR-12:** The system should be documented sufficiently to support future maintenance and development.

## 4. User Stories and Acceptance Criteria

The following 20 user stories have been identified based on the stakeholder needs and functional requirements of the Clinic Appointment System. Each user story describes a desired functionality from the perspective of the user who needs it.

The user stories follow the standard format: As a [user], I want [function], so that [benefit].

### Acceptance Criteria

Acceptance criteria define the conditions that must be satisfied for each user story to be considered successfully completed. They provide clear and testable conditions for determining whether each user story meets the expected requirements.

| ID    | Functional Requirement           | User Story                                                                                               | Acceptance Criteria                                                                                                                                          |
|-------|----------------------------------|----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| US-01 | <b>FR-01 – User Registration</b> | As a user, I want to create an account so that I can access the Clinic Appointment System.               | 1. User can enter required registration information.<br>2. System validates the information.<br>3. System creates the account when the information is valid. |
| US-02 | <b>FR-02 – Secure Login</b>      | As a registered user, I want to log in securely so that I can access the functions available to my role. | 1. User can enter login credentials.<br>2. System validates the credentials.<br>3. User is granted access when the credentials are valid.                    |

|              |                                                               |                                                                                                                                          |                                                                                                                                                                                                                                                                      |
|--------------|---------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>US-03</b> | <b>FR-03 – Role-Based Access</b>                              | As a user, I want the system to provide role-based access so that I can only access functions and information appropriate to my role.    | <ol style="list-style-type: none"> <li>1. System identifies the user's role after login.</li> <li>2. System provides access according to the user's role.</li> <li>3. Unauthorized functions are restricted.</li> </ol>                                              |
| <b>US-04</b> | <b>FR-04 – Patient Profile Management</b>                     | As a patient, I want to manage my profile so that my personal information remains accurate and up to date.                               | <ol style="list-style-type: none"> <li>1. Patient can view profile information.</li> <li>2. Patient can update permitted profile information.</li> <li>3. System saves the updated information.</li> </ol>                                                           |
| <b>US-05</b> | <b>FR-05 – Doctor Search</b>                                  | As a patient, I want to search for doctors so that I can find a suitable doctor for my appointment.                                      | <ol style="list-style-type: none"> <li>1. Patient can enter search criteria.</li> <li>2. System displays matching doctors.</li> <li>3. Patient can select a doctor to view their information.</li> </ol>                                                             |
| <b>US-06</b> | <b>FR-06 – Doctor Information and Availability</b>            | As a patient, I want to view a doctor's professional information and availability so that I can choose a suitable doctor and time.       | <ol style="list-style-type: none"> <li>1. Patient can view the doctor's professional information.</li> <li>2. Patient can view the doctor's available dates and times.</li> <li>3. The displayed availability reflects the doctor's current availability.</li> </ol> |
| <b>US-07</b> | <b>FR-07, FR-08 – Available Slots and Appointment Booking</b> | As a patient, I want to view available appointment slots and book an appointment so that I can schedule a consultation with a doctor.    | <ol style="list-style-type: none"> <li>1. System displays available appointment slots.</li> <li>2. Patient can select an available slot.</li> <li>3. System confirms the appointment after successful booking.</li> </ol>                                            |
| <b>US-08</b> | <b>FR-09 – Prevent Double-Booking</b>                         | As a patient, I want the system to prevent double-booking of appointment slots so that my confirmed appointment remains reserved for me. | <ol style="list-style-type: none"> <li>1. System marks a booked slot as unavailable.</li> <li>2. Another patient cannot book the same slot.</li> <li>3. System displays an appropriate message when the slot is no longer available.</li> </ol>                      |
| <b>US-09</b> | <b>FR-10 – Appointment Cancellation</b>                       | As a patient, I want to cancel my appointment so that I can inform the clinic when I can no longer attend.                               | <ol style="list-style-type: none"> <li>1. Patient can view eligible appointments for cancellation.</li> <li>2. Patient can select an appointment to cancel.</li> <li>3. System updates the appointment status after cancellation.</li> </ol>                         |
| <b>US-10</b> | <b>FR-11 – Appointment Rescheduling</b>                       | As a patient, I want to reschedule my appointment so that I can choose another available time when my plans change.                      | <ol style="list-style-type: none"> <li>1. Patient can select an existing appointment to reschedule.</li> <li>2. System displays available alternative slots.</li> <li>3. System updates the appointment after a new slot is selected.</li> </ol>                     |

|              |                                                     |                                                                                                                               |                                                                                                                                                                                                                                                                     |
|--------------|-----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>US-11</b> | <b>FR-12 – Appointment Confirmation</b>             | As a patient, I want to receive appointment confirmation so that I know my appointment has been successfully scheduled.       | <ol style="list-style-type: none"> <li>1. System generates confirmation after successful booking.</li> <li>2. Confirmation includes relevant appointment details.</li> <li>3. Patient can view the confirmation.</li> </ol>                                         |
| <b>US-12</b> | <b>FR-13 – Appointment History</b>                  | As a patient, I want to view my upcoming and previous appointments so that I can keep track of my appointments.               | <ol style="list-style-type: none"> <li>1. Patient can view upcoming appointments.</li> <li>2. Patient can view previous appointments.</li> <li>3. Appointment details are displayed accurately.</li> </ol>                                                          |
| <b>US-13</b> | <b>FR-14 – Appointment Notifications/Reminders</b>  | As a patient, I want to receive appointment reminders so that I do not forget my scheduled appointment.                       | <ol style="list-style-type: none"> <li>1. System identifies upcoming appointments.</li> <li>2. System sends a reminder for an upcoming appointment according to the configured schedule.</li> <li>3. Reminder contains the relevant appointment details.</li> </ol> |
| <b>US-14</b> | <b>FR-15 – Doctor Profile Management</b>            | As a doctor, I want to manage my professional profile so that patients can see accurate information about me.                 | <ol style="list-style-type: none"> <li>1. Doctor can view their professional profile.</li> <li>2. Doctor can update permitted professional information.</li> <li>3. System saves the updated information.</li> </ol>                                                |
| <b>US-15</b> | <b>FR-16 – Doctor Availability Management</b>       | As a doctor, I want to manage my availability so that patients can book appointments during my available times.               | <ol style="list-style-type: none"> <li>1. Doctor can set available dates and times.</li> <li>2. Doctor can update their availability.</li> <li>3. Updated availability is reflected when patients view appointment slots.</li> </ol>                                |
| <b>US-16</b> | <b>FR-17, FR-18 – Doctor Appointment Management</b> | As a doctor, I want to view and manage my appointment schedule so that my appointments remain organized and up to date.       | <ol style="list-style-type: none"> <li>1. Doctor can view scheduled appointments.</li> <li>2. Doctor can view relevant appointment details.</li> <li>3. Doctor can manage their appointment schedule according to their permissions.</li> </ol>                     |

## Product Backlog

The following Product Backlog contains the 20 prioritized user stories for the Clinic Appointment System. Each backlog item includes its priority order, functional requirement, user story, acceptance criteria, and priority classification.

| Order | ID    | Functional Requirement                      | User Story                                                                                                                            | Acceptance Criteria                                                                                                                                                                                    | Priority  |
|-------|-------|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| 1     | US-01 | FR-01 – User Registration                   | As a user, I want to create an account so that I can access the Clinic Appointment System.                                            | 1. User can enter required registration information.<br>2. System validates the information.<br>3. System creates the account when the information is valid.                                           | Must Have |
| 2     | US-02 | FR-02 – Secure Login                        | As a registered user, I want to log in securely so that I can access the functions available to my role.                              | 1. User can enter login credentials.<br>2. System validates the credentials.<br>3. User is granted access when the credentials are valid.                                                              | Must Have |
| 3     | US-03 | FR-03 – Role-Based Access                   | As a user, I want the system to provide role-based access so that I can only access functions and information appropriate to my role. | 1. System identifies the user's role after login.<br>2. System provides access according to the user's role.<br>3. Unauthorized functions are restricted.                                              | Must Have |
| 4     | US-15 | FR-16 – Doctor Availability Management      | As a doctor, I want to manage my availability so that patients can book appointments during my available times.                       | 1. Doctor can set available dates and times.<br>2. Doctor can update their availability.<br>3. Updated availability is reflected when patients view appointment slots.                                 | Must Have |
| 5     | US-05 | FR-05 – Doctor Search                       | As a patient, I want to search for doctors so that I can find a suitable doctor for my appointment.                                   | 1. Patient can enter search criteria.<br>2. System displays matching doctors.<br>3. Patient can select a doctor to view their information.                                                             | Must Have |
| 6     | US-06 | FR-06 – Doctor Information and Availability | As a patient, I want to view a doctor's professional information and availability so that I can choose a suitable doctor and time.    | 1. Patient can view the doctor's professional information.<br>2. Patient can view the doctor's available dates and times.<br>3. The displayed availability reflects the doctor's current availability. | Must Have |

|    |       |                                                        |                                                                                                                                          |                                                                                                                                                                                                                                                  |                    |
|----|-------|--------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| 7  | US-07 | FR-07, FR-08 – Available Slots and Appointment Booking | As a patient, I want to view available appointment slots and book an appointment so that I can schedule a consultation with a doctor.    | <ol style="list-style-type: none"> <li>1. System displays available appointment slots.</li> <li>2. Patient can select an available slot.</li> <li>3. System confirms the appointment after successful booking.</li> </ol>                        | <b>Must Have</b>   |
| 8  | US-08 | FR-09 – Prevent Double-Booking                         | As a patient, I want the system to prevent double-booking of appointment slots so that my confirmed appointment remains reserved for me. | <ol style="list-style-type: none"> <li>1. System marks a booked slot as unavailable.</li> <li>2. Another patient cannot book the same slot.</li> <li>3. System displays an appropriate message when the slot is no longer available.</li> </ol>  | <b>Must Have</b>   |
| 9  | US-11 | FR-12 – Appointment Confirmation                       | As a patient, I want to receive appointment confirmation so that I know my appointment has been successfully scheduled.                  | <ol style="list-style-type: none"> <li>1. System generates confirmation after successful booking.</li> <li>2. Confirmation includes relevant appointment details.</li> <li>3. Patient can view the confirmation.</li> </ol>                      | <b>Must Have</b>   |
| 10 | US-16 | FR-17, FR-18 – Doctor Appointment Management           | As a doctor, I want to view and manage my appointment schedule so that my appointments remain organized and up to date.                  | <ol style="list-style-type: none"> <li>1. Doctor can view scheduled appointments.</li> <li>2. Doctor can view relevant appointment details.</li> <li>3. Doctor can manage their appointment schedule according to their permissions.</li> </ol>  | <b>Must Have</b>   |
| 11 | US-04 | FR-04 – Patient Profile Management                     | As a patient, I want to manage my profile so that my personal information remains accurate and up to date.                               | <ol style="list-style-type: none"> <li>1. Patient can view profile information.</li> <li>2. Patient can update permitted profile information.</li> <li>3. System saves the updated information.</li> </ol>                                       | <b>Should Have</b> |
| 12 | US-09 | FR-10 – Appointment Cancellation                       | As a patient, I want to cancel my appointment so that I can inform the clinic when I can no longer attend.                               | <ol style="list-style-type: none"> <li>1. Patient can view eligible appointments for cancellation.</li> <li>2. Patient can select an appointment to cancel.</li> <li>3. System updates the appointment status after cancellation.</li> </ol>     | <b>Should Have</b> |
| 13 | US-10 | FR-11 – Appointment Rescheduling                       | As a patient, I want to reschedule my appointment so that I can choose another available time when my plans change.                      | <ol style="list-style-type: none"> <li>1. Patient can select an existing appointment to reschedule.</li> <li>2. System displays available alternative slots.</li> <li>3. System updates the appointment after a new slot is selected.</li> </ol> | <b>Should Have</b> |
| 14 | US-12 | FR-13 – Appointment History                            | As a patient, I want to view my upcoming and previous appointments so that I can keep track of my appointments.                          | <ol style="list-style-type: none"> <li>1. Patient can view upcoming appointments.</li> <li>2. Patient can view previous appointments.</li> </ol>                                                                                                 | <b>Should Have</b> |

3. Appointment details are displayed accurately.

|    |       |                                                    |                                                                                                                                          |                                                                                                                                                                                                       |                    |
|----|-------|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| 15 | US-13 | <b>FR-14 – Appointment Notifications/Reminders</b> | As a patient, I want to receive appointment reminders so that I do not forget my scheduled appointment.                                  | 1. System identifies upcoming appointments.<br>2. System sends a reminder for an upcoming appointment according to the configured schedule.<br>3. Reminder contains the relevant appointment details. | <b>Should Have</b> |
