Clinic Appointment System

Product Owner Decisions and Sprint 4 Clarifications

Course: ITC315 – Software Engineering
Role: Product Owner
Sprint: Sprint 4

1. Patient Information Management

Question: Which patient fields can receptionists edit, and which private medical fields should be restricted?

Receptionists can view and edit general patient information, including:

- Full name
- Age or date of birth
- Phone number
- Email address
- Home address

However, sensitive medical information should be restricted.

The following fields should not be editable by receptionists:

- Medical diagnosis
- Medical history
- Current medications
- Treatment records
- Other confidential clinical information

Receptionists may view limited medical information when necessary for appointment administration, but only authorized medical staff should update clinical records.

Reason: This protects patient privacy and prevents unauthorized changes to medical information.

2. Doctor Information and Account Creation

Question: Which doctor fields can receptionists edit, and who is allowed to create doctor and receptionist accounts?

Receptionists can update administrative doctor information, such as:

- Doctor's phone number
- Email address
- Office or consultation room
- Working schedule (when authorized)

The following information should be managed by the doctor or administrator:

- Full professional name
- Medical specialization
- Qualifications and certifications
- Professional experience

Account creation:

- Only administrators can create doctor accounts.
- Only administrators can create receptionist accounts.
- Doctors and receptionists receive their login credentials after their accounts are created.
- Administrators can activate, deactivate, or manage staff accounts.

Reason: Account creation should be restricted to administrators to maintain system security and control access.

3. Appointment Management Permissions

Question: Exactly which appointment actions can receptionists and administrators perform: book, cancel, and reschedule, and under what rules?

Both receptionists and administrators can perform the following actions on behalf of patients:

Action	Receptionist	Administrator
Book appointments	Yes	Yes
Cancel appointments	Yes	Yes
Reschedule appointments	Yes	Yes
View appointments	Yes	Yes

Appointment rules:

1. Booking: Staff must select an available doctor, date, and time. The system must prevent double-booking.
2. Cancellation: Appointments should normally be cancelled at least 2 hours before the scheduled time.
3. Late cancellation: If a patient requests cancellation within 24 hours, receptionists or administrators may handle the request with an appropriate reason recorded.
4. Rescheduling: Staff can move an appointment to another available time slot. The original slot must become available again.
5. Past appointments: Completed appointments cannot be cancelled or rescheduled.
6. Record keeping: Every appointment change should update the system and maintain accurate appointment records.

Patients should also be able to cancel or reschedule their own eligible appointments through their accounts, subject to the same rules.

Reason: This provides flexibility while maintaining accurate appointment schedules.

4. Clinic Information Management (US-20)

Question: Which clinic information fields are required for US-20?

The system should include the following clinic information:

Required fields:

- Clinic name
- Clinic address
- Contact phone number
- Opening hours

Additional recommended fields:

- Clinic email address
- Available services
- Clinic description

Receptionists and administrators can view and update permitted clinic information. However, only authorized users should make changes.

The system should validate required fields before saving updates.

Reason: Patients need accurate clinic information to contact the clinic, locate it, and understand its operating hours.
