Sprint 3 Daily Scrum Meeting #3 – October 24, 2026

Project: Clinic Appointment System
Meeting Type: Daily Scrum #3
Duration: 7:15 minutes
Platform: Google Meet

Attended by:

Name	Role
Mineh Jami	Scrum Master
Sewara Rashidi	Team Developer
Sonbol Almas	Team Developer

Meeting subject:

The purpose of the meeting was to share the progress made by the team in the last day. We also planned to discuss the steps on how to proceed next.

Meeting Summary:

Mineh Jami (Scrum master): Introduced the meeting, shared the sprint backlog, inquired about problems and blockers and clarified the expectations for the next day.

Sewara Rashidi(Team developer): She shared her progress on the last day of the sprint, which included completing the backend functionality for user story 16, as well as final UML documentation and system integration. She explained that she continued working on doctor appointment backend using mySQL and php, making sure that doctors can retrieve their schedules and appointment details. She also shared that she focused on role based access, meaning each doctor could only access their own schedule, not somebody else's. After that she reviewed backend functionality and checked on database integrity and made sure the technical testing documentation was complete.

Sonbol Almas(Team developer): She shared that her main focus on the last day of the sprint was to complete the doctor appointments page, finalizing the frontend integration, and completing final frontend testing. She continued her work on user story 16 and focused on completing the doctor appointment page using HTML, and BootStrap. She also worked on integrating the php based backend, and focused on navigation between pages, and confirming that patient updated information will get displayed. She also explain her work on the responsiveness of the page, and together with Sewara, they did integration testing, identifying issues and making necessary corrections.

Key Points of the meeting:

- Completed the backend and frontend integration for US-16 Doctor Appointment Management.
- Finalized doctor appointment backend functionality using PHP and MySQL.
- Implemented role-based access control to ensure doctors can only access their own schedules and appointment details.
- Completed the Doctor Appointments page and integrated it with the PHP backend.
- Verified navigation between pages and the display of updated patient information.
- Improved the responsiveness and usability of the doctor appointment interface.
- Finalized UML documentation, system integration, and technical testing documentation.
- Conducted integration and frontend testing, identified issues, and implemented necessary corrections.
- Verified database integrity and the accuracy of appointment information.
