Sprint 2 — Product Owner Checklist

Project: Clinic Appointment Management System
Role: Product Owner
Sprint: 2

1. Doctor Information and Search

- ☑ Confirm that patients can view the doctor's full name, specialty, qualifications, years of experience, and professional biography.
- ☑ Ensure private contact information is not displayed unnecessarily.
- ☑ Confirm that patients can search for doctors by name and medical specialty.
- ☑ Ensure the system displays relevant doctors based on the search criteria.

2. Doctor Availability Management

- ☑ Confirm that doctors can enter their available working hours as a time range for a specific date.
- ☑ Ensure the system divides availability ranges into 30-minute appointment slots.
- ☑ Confirm that patients can see only available appointment slots.
- ☑ Ensure doctors can create, update, and delete their availability.
- ☑ Confirm that the system prevents overlapping availability periods on the same date.
- ☑ Ensure doctors receive a warning when attempting to remove availability that contains an existing appointment.
- ☑ Confirm that existing appointments are not silently cancelled when availability is changed or deleted.

3. Appointment Booking

- ☑ Confirm that patients receive a success message after booking an appointment.
- ☑ Ensure detailed booking information is provided separately under US-11.
- ☑ Confirm that appointments are automatically confirmed after successful booking.
- ☑ Ensure staff approval is not required for standard appointment bookings.
- ☑ Verify that two patients cannot book the same appointment slot.
- ☑ Confirm that the system prevents overlapping confirmed appointments for the same doctor.
